

Temperature Controller

1/16 DIN - 48 x 48 mm

Platinum™ Series M400 Line

Flexibility, with ease of operation and highly valued features

Athena's Platinum™ Series M400 is a compact 48x48 mm size controller with Heat/Cool capability, suitable for a wide range of applications. It offers easy configuration and simple operation, combined with standard features including

auto-tuning, auto/manual, 3 standard outputs, and IP65 front-panel protection. Options include serial communications, analog control or retransmission output, transmitter power supply, start-up and timer special functions, auxiliary current transformer input, choice of two front-bezel colors, and DIN rail mounting.

Platinum™ SERIES

athenacontrols.com

The right solution for your needs

Your Need	Our Solution
Heater failure alert	Heater break alarm with current transformer
Both heating and cooling functions	Heat/cool double action
Easy replacement and quick start-up	Configuration by simple to use codes
Correct tuning for any condition	Automatic selection between two different tuning methods
Alarm signaling	Absolute, band, and deviation alarms, latching/blocking
Interfacing with other devices	Serial communications at 9600 baud Modbus/Jbus protocol, analog retransmission output
Short learning curve	All Platinum Series models share the same operating method
Ergonomic compatibility with other devices	Two colors: beige or dark gray front panels
Environmental protection	IP65 front-panel protection (indoor dust and water protection)
Easy to use	Ergonomic keypad, clear and easily understood display
Noise immunity	Electromagnetic compatibility
Universal input signals, linear as well as non-linear	Configurable input (TC, RTD, mA, volt and ΔT , infrared sensor)
Cost reduction	Built-in timer and start-up functions
Reliability and safety	CE compatibility, cULus, 3 year warranty
Technical support	Technical applications assistance from ATHENA sales and after sales service

* The OP4 analog output option can be configured as process variable (PV) or setpoint (SP) retransmission –or– as an analog control output. The OP1, OP2, or OP3 output can be replaced by the OP4 analog control output option; the replaced output is forfeited.

Technical Data

Features at Env. 25°C	Description				Input Type	Scale Range				
Total configurability	From keypad or serial communications, the user selects: type of input - associated functions and corresponding outputs - type of control algorithm - type of output and safe conditions - alarm types and functionality - control parameter values				RTD Pt100Ω a 0°C	-99.9...300.0 °C -99.9...572.0 °F -200...600 °C -328...1112 °F				
Process Variable(PV) input (for signal ranges see Table 1)	Common characteristics	A/D converter with 50,000 points Update measurement time: 0.2 sec Input shift: ± 60 digits	Sampling time: 0.5 sec Input filter: 1...30 sec (OFF = 0)		T/C type L Fe-Const.	0...600 °C 32...1112 °F				
	Accuracy	0.25% ± 1 digit (T/C and RTD) 0.1% ± 1 digit (mA* and mV)	Between 100 and 240V~ error is minimal		T/C type J Fe-Cu 45% Ni	0...600 °C 32...1112 °F				
	Resistance thermometer (for ΔT: R1+R2 must be <320Ω)	Pt100Ω at 0°C (IEC 751) °C / °F selectable	2 or 3 wire connection	Line: 20Ω max (3 wire) Thermal drift 0.35°C/10°C env. T. <0.35°C/10Ω line resist.	T/C type T Cu - CuNi	-200...400 °C -328...752 °F				
	Thermocouple	L,J,T,K,S (IEC 584) °C / °F selectable	Internal cold junction compensation	Line: 150Ω max Thermal drift <2µV/°C env. T. <5µV/Ω line resist.	T/C type K Chromel-Alumel	0...1200 °C 32...2192 °F				
	DC input (current)	0/4...20mA with 2.5Ω ext. Shunt Rj > 10MΩ	Engineering units, floating decimal point, Low range -999...9999	Input drift: <0.1% / 20°C env. T.	T/C type S Pt10%Rh-Pt	0...1600 °C 32...2912 °F				
	DC input (voltage)	0/10...50mV, Rj > 10MΩ	High range -999...9999 100 digits minimum		0/4...20 mA 0/10...50 mV	Configurable engineering units mA, mV, V, bar, psi, RH, pH				
Auxiliary input	CT current transformer	50 or 100mA input hardware selectable	Current visualization 10...200 A with 1A resolution and heater break alarm							
Digital input (option)	The closure of the external contact produces any of the following actions:		Auto/manual mode change, stand-by setpoint activation, keypad lock, timer start							
Operating modes	1 single output or heat/cool P.I.D. loop or ON/OFF with 1 or 2 alarms									
Control mode	Algorithm	P.I.D. with overshoot control or ON/OFF								
	Proport. band (P)	0.5...999.9%								
	Integral time (I)	0.1...100.0 min	OFF = 0	P.I.D. algorithm						
	Derivative time (D)	0.01...10.00 min								
	Cycle time	1...200 sec.								
	Dead band	-10.0...10.0		For Heat/Cool mode						
	Relative cool gain	0.1...10.0								
	Cool cycle time	1...200 sec.								
	Overshoot control	0.01...1.00	P.I.D. algorithm							
	High limit	100.0...10.0% (heat) -100.0...-10.0% (cool)								
	Hysteresis	0.1...10.0%	ON/OFF algorithm							
OP1 output	SPST relay N.O., 2A/250V~ for resistive load Triac, 1A/250V~ for resistive load									
OP2 output	Logic (SSR drive) not isolated: 5V-, ± 10%, 30mA max SPST relay N.O., 2A/250V~ for resistive load									
OP3 output	SPST Relay N.O., 2A/250V~ for resistive load Triac, 1A/250V~ for resistive load									
OP4 (option) analog output**	Galvanically isolated: 500V~/1min Resolution: 12bit (0.025%) Accuracy: 0.1%		Current output: 0/4...20mA 750Ω/15V max							
AL2-AL3 alarms	Hysteresis 0.1 ... 10.0% of range									
	Action	Active high	Action type	Deviation threshold ± range						
		Active low		Band threshold 0...range						
		Special functions		Absolute threshold, whole range						
	Sensor break, heater break, hoop break									
Setpoint	Local and stand-by selectable by keypad, digital input, or serial communications									
	Up and down ramps		0.1...999.9 digit/min (OFF = 0)							
	Low limit		from low range to high limit							
	High limit		from low limit to high range							
Tuning	One-shot fuzzy tuning: Step response or natural frequency method, auto-selected Adaptive tune: Self-learning and continuous calculation of P.I.D. parameters									
Auto/manual Station	Standard with bumpless function, by keypad, digital input, or serial communications									

*Requires field calibration for 0.1% accuracy

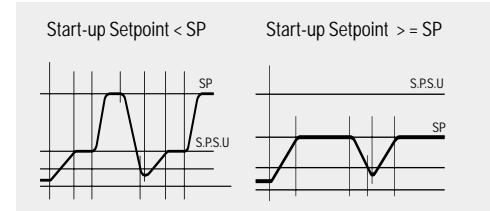

**PV/SP Retransmission or analog control output

Table 1: Process Variable (PV) inputs/signal ranges

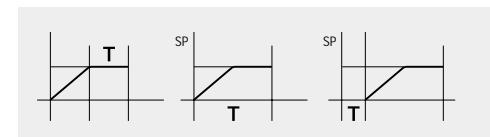

Special Functions

To improve instrument performance and to reduce wiring and installation costs, two special functions are available:

- Start-up

- Timer

The use of these functions avoids additional device installation (e.g., an external timer), therefore allowing a significant cost reduction.

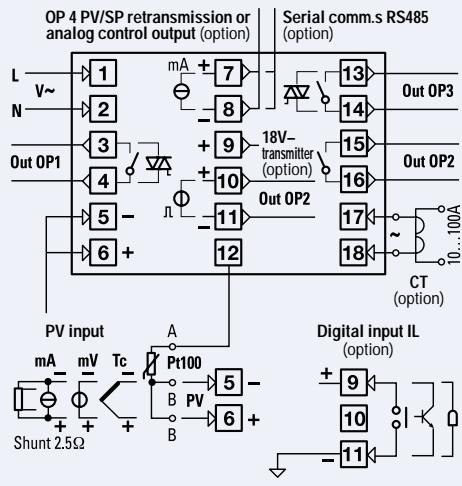

In addition, there are:

- **A Keypad lock/unlock** function, to avoid incorrect operator actions
- **An Output lock/unlock** function, that makes it possible to stop the control action at any time, without affecting the process variable display, and without switching-off the power supply.

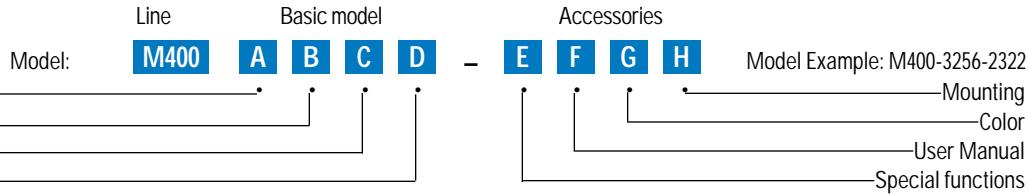

Technical Data

Features at Env. 25°C	Description
Ser. comms. (opt.)	RS485 isolated, Modbus/Jbus protocol 1200, 2400, 4800, 9600 bit/sec, two wires
Aux. power sup.	+18V - ±20%, 30mA max for external transmitter supply (option)
Operational safety	Measured input Detection of out of range, short circuit, or sensor break with automatic activation of the safety strategies and alerts on display
	Control output Safety value: 0...100%, (-100...100% for Heat/Cool mode) (user enabled/disabled).
	Parameters A permanent, non-volatile memory stores for unlimited time all the parameter and configuration values
General characteristics	Password A password protects access to the instrument's configuration
	Power supply 100-240V~ (-15% +10%) 50/60Hz or 24V~(-25% +12%), 50/60Hz and 24V- (-15% +25%). Power consumption 2.6W max
	Safety Compliance EN61010-1 (IEC 1010-1), installation class 2 (2500V), pollution class 2, class II instrument
Electromagnetic compatibility	Electromagnetic compatibility Compliance to CE standards for industrial system and equipment
	Protection EN60529 (IEC 529)
	Overall dimensions 1/16 DIN - 48 x 48mm, depth 120 mm, weight 130g appr.
Approvals	Panel cut-out: 45 ^{0.6} x 45 ^{0.6} mm cULus
